Digital Literacy Project Report

CSE0001- Digital Literacy

Name	Aryan Saxena
Registration Number	25BCY10045
Branch	BTech CSE Cybersecurity
Year	First Year
Course Code	CSE0001
Date	29/03/2026

Introduction

As a newly selected Student Digital Ambassador at VIT Bhopal University, my primary responsibility is to assist my peers in navigating the complexities of the digital landscape. This project serves as a comprehensive Digital Literacy Portfolio, demonstrating the essential skills required for professional online communication, safe internet practices, and collaborative digital work. The following report documents five distinct tasks—ranging from infographic design to cybercrime awareness—each designed to build a foundational digital presence that is professional, secure, and academically rigorous.

Task 1 Write-up: Digital Literacy Awareness Infographic

For this task, I designed a one-page visual resource using **Canva** to educate my peers on the core pillars of digital literacy. My infographic focuses on three specific topics: **Safe Internet Practices**, **Professional Online Presence**, and **Email Etiquette**.

The design utilizes a clean, modular layout with distinct icons to represent each category, making the information easily scannable for students. I chose a professional blue and white colour palette to maintain a formal yet engaging aesthetic. One aspect I found particularly interesting was the challenge of condensing complex safety protocols into short, actionable bullet points without losing their importance . Navigating the balance between visual appeal and information density was a valuable exercise in digital communication.

Task 2 Write-up: Build Your Student Digital Portfolio

In the modern academic and professional environment, a digital presence is a necessity. I established and updated my profiles on three key platforms: **GitHub**, **LinkedIn**, and **Kaggle**.

- **GitHub:** Used for version control and showcasing my coding projects.
- **LinkedIn:** Used for professional networking and documenting my academic journey.
- **Kaggle:** Chosen as a platform to practice data science and participate in global competitions.

Over the next four years, I plan to use GitHub as a central repository for all my coursework and personal projects. I will use LinkedIn to connect with alumni and industry professionals to stay informed about internship opportunities. Finally, I intend to use Kaggle to build a verifiable track record of technical problem-solving. These platforms collectively form the foundation of my professional digital identity.

Task 3 Write-up: Explore Coding & Collaboration Platforms

To enhance my technical and collaborative skills, I engaged with **HackerRank** for coding practice and **Google Workspace** for digital collaboration.

On **HackerRank**, I completed the "Python Introduction" challenge, which reinforced my understanding of basic syntax and logical problem-solving in a timed environment. For the collaboration component, I developed a "Digital Literacy Awareness Quiz" using **Google Forms**. This form includes multiple-choice questions regarding password security and short-answer sections for feedback on digital tool usage.

Academically, these tools are invaluable. Platforms like HackerRank prepare me for technical interviews, while Google Forms and Sheets allow me to collect and analyze data efficiently for group projects. Mastery of these tools ensures that I can contribute effectively to collaborative academic environments.

Task 4 Write-up: Draft a Professional Email & Etiquette Guide

Effective communication is a hallmark of professional success. For this task, I drafted two formal emails: one requesting a deadline extension from a professor and another expressing interest in an internship to a coordinator. Both drafts prioritize a clear subject line, professional salutations, and a concise, respectful body.

Communication Scenario Reflection: One situation where poor digital communication can cause significant issues is the "reply-all" mistake in a large organizational thread. I once read about a student who accidentally sent a private complaint about a faculty member to the entire department because they failed to check the recipient list. This resulted in formal disciplinary action and a damaged reputation. This taught me that professional communication requires a "pause and proofread" habit—always verifying the recipient and the tone before clicking send.

Task 5 Write-up: Cybercrime Awareness Case Study

Researching the mechanics of **Phishing** was the most enlightening part of this module. I was surprised to learn how sophisticated "Spear Phishing" has become, specifically targeting college students with fake scholarship offers or urgent "account deactivation" warnings that look identical to official university emails.

As a result of this research, the one habit I will personally change is the way I handle links in emails. I will no longer click on links from unsolicited emails; instead, I will manually type the official website URL into my browser to ensure I am on a legitimate portal. This "zero-trust" approach to unsolicited digital communication is essential for maintaining financial and data security.

Conclusion

This project has significantly broadened my understanding of what it means to be digitally literate in a professional context. Beyond just using tools, I have learned the importance of maintaining a curated professional identity and the critical need for vigilance in cybersecurity. As a Student Digital Ambassador, I am now better equipped to guide my peers in building their own portfolios and communicating safely and effectively in the digital world.
